 - Revenue by tracking

Interfaces

- Credit card processing using Heartland's Exchange web transaction services
- Call accounting - captures call detail, includes user-defined rate tables
- Electronic key card
- Movie/video charges capture, express checkout
- PBX - set wakeup calls or message light indicator from reservation screen, update room status (housekeeping status)
- Restaurant - captures room charges directly from your restaurant system

We have written a number of interfaces for different phone/movie/restaurant/key systems. Let us know what you have and we'll see if our interface can adapt. (it usually can) If so, it's included! If not, we can write a typical interface for less than \$500.

System Requirements

Windows® 2000, XP or newer is required on all workstations. The faster, the better performance. Minimum of 1gig ram (2gig for Vista). A high speed internet connection is required to take advantage of all the features of this product (credit card processing, web services, remote support).

For web services, a web server application is required. We recommend Microsoft's IIS or the Apache web server (www.apache.org).
